

# Arcot A-OK™ On-Demand

## Multi-factor Authentication and Secure SSO Service

*“One Secure Credential, Unlimited Secure Access”*

### DATA SHEET

#### Highlights

- Secure single sign-on access for Salesforce and other SaaS applications
- Multi-factor authentication that prevents phishing and man-in-the-middle attacks
- Active Directory and LDAP integration
- Works with existing accounts on every application
- Can be implemented in minutes

**THE SAAS APPLICATION CHALLENGE:** You use Salesforce and other on-demand applications because you want to take advantage of their capabilities without having to install and maintain the application on-premise. However, you have some concerns about verifying who is accessing your company's confidential data that is stored outside of your IT environment. And, you don't want to add yet another password that your users will have to remember every time you enable a new web-based application. You are looking for an integrated solution that will provide SSO capabilities with strong authentication to protect your company and your users from fraud.

**THE ARCOT A-OK ON-DEMAND SOLUTION:** A-OK On-Demand is a multi-factor authentication and single sign-on service that verifies and protects identities and data within your SaaS applications. Arcot A-OK On-Demand ensures that only authorized users gain access to your confidential, proprietary, or regulated data. Employing risk-based authentication and a transparent software credential, A-OK protects your users from phishing, man-in-the-middle and other Internet attacks. Now, you can provide fraud detection and multi-factor authentication for your Salesforce and other SaaS applications with the same anytime, anywhere access as before. Your users don't have to change their sign-in behavior or carry around tokens or cards. They get the added benefit of having one convenient password for logging into all of their web applications. Once logged into a particular application you can access multiple SaaS applications without having to login again. And, you don't have to change your application usernames to take advantage of the A-OK On-Demand service.

#### Leader in On-Demand Authentication

As the leader in online card authentication security, Arcot A-OK On-Demand builds on Arcot's hosted card authentication service used by over 30 million Visa, MasterCard and JCB cardholders worldwide. With Arcot A-OK On-Demand, you will get the benefit of Arcot's many years of experience in delivering on-demand software to over 12,000 financial institutions and 200,000 merchants.

#### No Hardware, No Drivers, No Tokens

Arcot A-OK On-Demand delivers the strong authentication you need with a simple-to-use, secure software credential that is transparent to your users. There are no hardware tokens to deploy, resulting in significant cost savings because there are no physical tokens to distribute and manage. Arcot

hosts all components of the service in its SAS 70 certified, PCI DSS-compliant data center.

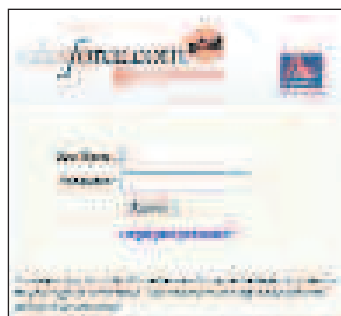

#### No Change to User Experience

Arcot A-OK On-Demand lets you upgrade from simple passwords without changing your users' login experience. They see their familiar username/password interface while being protected behind the scenes with risk-based and multi-factor authentication. Your users and your business are instantly protected from phishing, man-in-the-middle and other unauthorized access attempts.

#### One Secure Credential, Unlimited Access

Arcot A-OK On-Demand issues a transparent, secure, software credential, the ArcotID, that is unique to each user. With secure single sign-on your users will

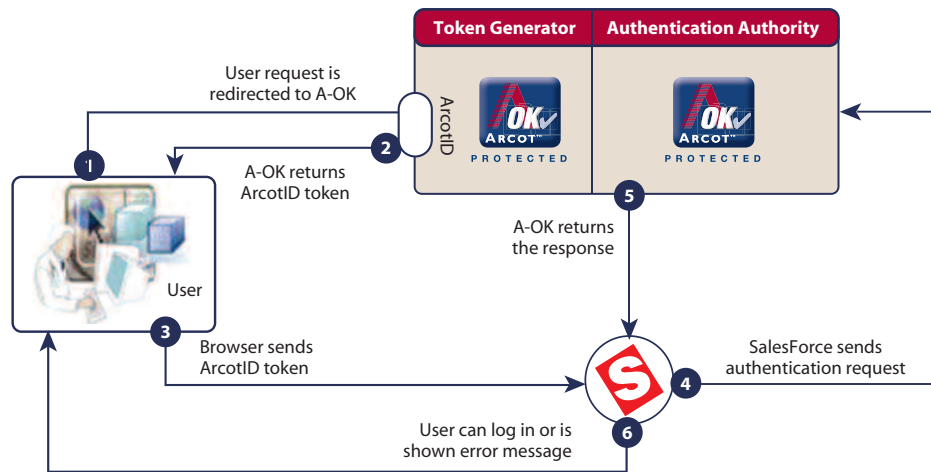

### ARCOT A-OK ON-DEMAND USER SALESFORCE EXPERIENCE

Q&A during 'forgotten password' process

This figure describes the implementation of the SSO-based A-OK On-Demand service that logs users into Salesforce. In this integrated solution, Salesforce provides the application services, while Arcot A-OK On-Demand controls the authentication.

have one password that when combined with your ArcotID will allow them to securely access any application that is registered to the A-OK On-Demand Service. The service automatically and securely issues, maintains, and updates the ArcotID and your application passwords. Even if fraudsters steal specific passwords, they cannot gain access because they lack the ArcotID required to connect to applications.

### Access Anywhere, Anytime

Employees who connect from a new computer or from any remote location are verified by answering a series of personal security questions. If employees leave or change positions, administrators can quickly and easily revoke or modify access — streamlining the otherwise burdensome licensing and provisioning process.

### Lower Your Cost of Ownership

Arcot A-OK On-Demand delivers multi-factor authentication completely in software, giving you the lower cost of ownership and simplicity of management that hardware-based token alternatives cannot provide. With Arcot, there is no hardware to lose, fail, or break. You get the benefit of a high level of security without the headaches typically associated with the maintenance and distribution of hardware tokens.

### Supports Regulatory Requirements and Industry Standards

Organizations of any size can use Arcot A-OK On-Demand to meet a number of government and industry regulations for strong authentication, including FFIEC, SOX, HIPAA, and SAFE.

Arcot supports industry standards such as SAML and OpenID.

### High Performance

Arcot designed Arcot A-OK On-Demand with virtually unlimited scalability, unparalleled ease of use, and extremely low latency. You can upgrade your users to strong authentication without degrading application or network performance.

### Ready, Get Set, Go

It's easy to get started with Arcot A-OK On-Demand. Your Salesforce Administrator simply follows these simple steps and you'll be up and running in minutes.

- Enable SSO in your Salesforce application and set the Single Sign-on Gateway URL to point to the Arcot A-OK On-Demand URL
- Create an SSO profile for users that will be required to use A-OK On-Demand
- Configure the A-OK On-Demand console to manage the Salesforce users and their credentials

Your users enroll one time to set their password and choose challenge questions and answers. The ArcotID is then transparently placed on the user's desktop for secure access to your applications. The management of forgotten passwords and remote login are self-service.

### Simple Management Interface

Administrators use standard Salesforce interfaces to set up Salesforce users for the A-OK On-Demand Service. You also have access to the intuitive A-OK On-Demand console to enable, disable, reset and revoke credentials as well as obtain user activity reports.

## About Arcot Systems

Arcot Systems provides multi-factor authentication, digital signing, and cardholder authentication solutions. Arcot makes online transactions safe for millions of customers by blocking fraud and protecting access. Its software-only solutions eliminate the need for expensive hardware and complex login processes.
